

GOA WORKFORCE LOCALIZATION & PUBLIC ITES INFRASTRUCTURE

Status: Pipeline

TARGET CAPITAL	AMOUNT SECURED	REMAINING REQUIRED
Rs.42,000	Rs.0	Rs.42,000

1. Project Overview

This operational project establishes an integrated ITES Delivery Center and Workforce Academy in Goa designed to pull underemployed local youth out of underemployment and scale them into technical careers. Operating a 30-seat live operations lab, the facility acts as a high-speed technical service net that provides low-cost infrastructure maintenance and diagnostics for local state departments, public schools, and village panchayats.

2. Strategic Motive

To systematically bridge the technical employability gap for 12th HSSC Science and Commerce graduates in Goa, lower public IT procurement costs by 30-40% compared to out-of-state vendors, offering an enterprise-grade curriculum designed by an industry veteran with 7 years of specialized IT experience. By focusing heavily on student accountability and zero upfront costs for candidates, Private Limited over a 3-year operational window, the engine transitions from a grant-funded setup phase to a completely self-sustaining corporate utility model by Month 37.

3. Detailed Specifications

1. EXECUTIVE SUMMARY

Tecbunny Solutions Private Limited formally submits this comprehensive operational blueprint to establish an integrated ITES (IT Enabled Services) Delivery Center and Workforce Academy in Goa. Our strategy directly addresses critical regional economic gaps by deploying a captive talent pipeline model. Over a 36-month timeline, we will execute 10 structured training and apprenticeship cohorts to train 200 local Goan youth who have cleared their 12th HSSC (Science or Commerce). Tecbunny Solutions legally guarantees a minimum 50% internal absorption rate, directly hiring 100+ local candidates into permanent, full-time salaried corporate roles within our firm. To build the durable 30-seat live operations lab, diagnostic hardware assets, and fund the 3-year instructional framework, we are seeking a one-time, non-recurring infrastructure grant of Rs.35 Lakhs.

2. STRUCTURAL PROBLEM STATEMENT

- The Local Employability & Brain Drain Crisis: While Goa produces hundreds of computer science and diploma graduates annually, the vast majority lack the hands-on, field-ready hardware and configuration skills required by modern enterprises. Unemployed or underemployed local youth are forced to either accept low-wage, unrelated jobs or leave the state entirely, creating a severe tech talent drain.
- Exorbitant Public Procurement and Maintenance Costs: When local state departments, municipal bodies, panchayats, and public schools require network setups, system upgrades, or technical servicing, they are often forced to deal with out-of-state vendors. These external firms charge premium rates and high mobilization fees, draining Goa's public treasury.
- Extended Downtime & Public Service Latency: Because out-of-state service providers do not maintain distributed, hyper-local grassroots field teams across Goa, critical public tech systems

(such as school computer labs and e-governance portals) experience massive service delays and extended downtimes when hardware or network failures occur.

3. TWO-PHASE ECOSYSTEM ARCHITECTURE

Phase 1: Practical ITES Literacy Academy (Months 1–3)

20 selected local candidates per cohort undergo a rigorous, 90-day practical curriculum designed by an industry veteran with 7 years of specialized IT experience. The course covers hardware diagnostics, component-level fault isolation, enterprise OS deployment, network architecture (structured LAN cabling, routing, switching, IP addressing), and digital troubleshooting.

Phase 2: The Field Apprenticeship Phase (Months 4–6)

Trainees deploy directly into active field projects under the strict supervision of senior engineers. They run local technical clinics, upgrade infrastructure for common citizens, and assist local public departments to build live, hands-on experience under real corporate timelines.

4. THE ZERO-NET-COST STUDENT ACCOUNTABILITY FRAMEWORK

- **Eligibility Net:** Application is open to any Goan resident with a 12th HSSC qualification in Science or Commerce, ensuring recruitment hits the common population while selecting candidates with a baseline for logical and structured training.
- **The Commitment Deposit:** Upon selection into a cohort, candidates secure their seat with a Rs.5,00,000 per 100-student cycle liability (Rs.5,000 per student fully refundable Commitment Deposit) to ensure absolute skin in the game and eliminate dropouts.
- **The 80% Attendance Milestone Stipend:** This deposit does not enter Tecbunny's revenue stream. Upon successful completion of the Academy phase with a minimum verified attendance of 80%, the exact Rs.5,000 is disbursed back to the student as their field internship stipend, ensuring the net cost of this elite ITES education remains exactly Rs.0 for dedicated candidates.

5. CAPITAL ALLOCATION & 3-YEAR BUDGET MATRIX

Because Tecbunny is absorbing all future corporate payroll liabilities via its commercial service revenues, 100% of the requested Rs.35 Lakhs grant goes directly into physical, verifiable, and reusable assets that will serve all 10 batches across the full 36 months and beyond:

- **High-Durability Lab Infrastructure (Rs.15,00,000):** 30 enterprise-grade workstations, core switches, Cisco routers, power backups (UPS systems to counter local power cuts), and server racks built to endure 10 consecutive student cohorts.
- **Professional Teaching & Faculty Capital (Rs.8,00,000):** Retaining a dedicated, qualified Technical Lead for 36 months (~Rs.18,000/month) plus milestone industry guest lecturers to ensure zero instructional downtime.
- **Field Diagnostic & Mobile Kits (Rs.8,00,000):** Ruggedized deployment laptops, optical fiber splicing tools, and industrial network testing equipment for the 3-month field apprenticeship phases.
- **Bandwidth, Utilities & Rural Outreach (Rs.4,00,000):** 3 years of commercial-grade dedicated high-speed internet lease lines, lab electricity overheads, and taluka-level mobilization camps for common people.

6. LONG-TERM SUSTAINABILITY & PHASE II (YEAR 4+)

Unlike conventional skilling initiatives that require recurring state subsidies, the Tecbunny ITES Delivery Center is engineered for total financial autonomy starting in Month 37. The requested Rs.35 Lakhs grant is strictly a one-time capital expenditure (CapEx). Beyond Batch 10, all subsequent training cohorts, instructional salaries, and performance-linked stipends (Batch 11, Batch 12, Batch 13, and onwards) will be 100% financed out of Tecbunny Solutions' commercial IT service revenues and specialized placement/onboarding frameworks with partner MSMEs. The academy will continue operating as a permanent talent

pipeline for Goa, turning out 60+ trained technicians annually and systematically expanding our employment headcount beyond the initial 100+ job threshold without ever requiring a second round of government funding.

7. COMMERCIAL SERVICE LEVEL AGREEMENT (SLA) FRAMEWORK

Tecbunny Solutions Private Limited provides comprehensive tier-1 and tier-2 IT service management (ITSM) backed by a hyper-local response net that out-of-state vendors cannot match:

- Priority 1 (Critical): Main server crash or entire department network offline. Response Window: Under 30 Minutes. Resolution Target: Within 3 Hours.
 - Priority 2 (High): Localized network switch failure or multiple workstations down. Response Window: Under 1 Hour. Resolution Target: Within 6 Hours.
 - Priority 3 (Standard): Single workstation hardware issue or software updates required. Response Window: Under 4 Hours. Resolution Target: Within 24 Hours.
 - Penalty Clause: If Tecbunny Solutions fails to meet the P1 or P2 resolution targets for public infrastructure, a penalty service credit of 2% of the monthly contract value will be deducted per hour of delayed service, capped at 15% per billing cycle.
